PBLC

PNEUMATIC BALL-LOCKING CLAMPS

PBLC1023S-SUS

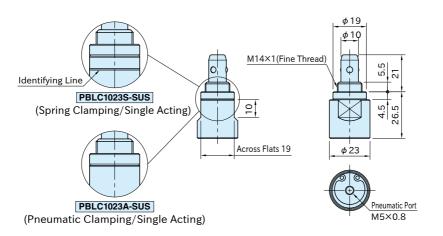

PBLC1023A-SUS

(Spring Clamping/Single Acting) (Pneumatic Clamping/Single Acting)

★Key Point —

Two clamping types are available.

Во	dy	Shaft	Ball	Spring	Retaining Ring	Seal
1	iless	I FIECTROIESS DICKEI DISTER	SUS440C stainless steel Quenched and tempered			Nitrile rubber (NBR)

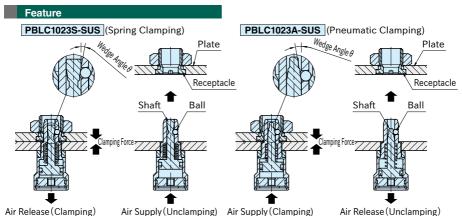

Part Number	Operating Air Pressure (MPa)	Clamping Force (N)	Weight (g)	Proper Receptacle
PBLC1023S-SUS	0.0- 0.7	50	71	PBLC-M16-SUS
PBLC1023A-SUS	0.3~0.7	150 *)		

^{*)} The clamping force above is at 0.5 MPa.

PBLC-M	BALL-LOCK RECEPTACLE		

PBLC1023S-SUS has an identifying line and PBLC1023A-SUS does not.

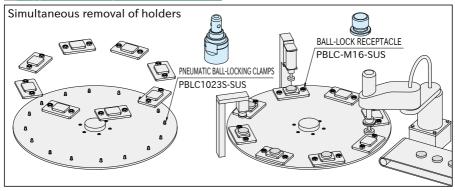

- All Supply Conclamping) All Supply Conclamping All Supply Conclamping
- $\cdot \text{The shaft pushes out the balls onto the tapered surface of the receptacle to pull down the plate.}\\$
- ·The wedge clamping prevents the plate from lifting up.
- ·Spring clamping type can keep clamping without air supply.

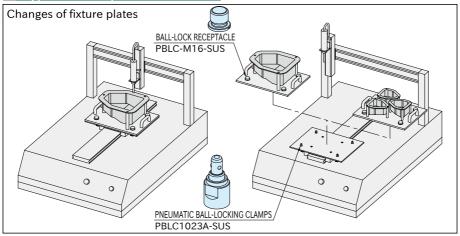

Performance Curve

(N) (N) (N) (N) (N)	PBLC1023S-SUS (Spring Clamping)	PBLC1023A-SUS (Pneumatic Clamping)
0 0.1 0.2 0.3 0.4 0.5 0.6 0.7 Air Pressure (MPa)	(N) (N)	200 Clamping Force 200 0.1 0.2 0.3 0.4 0.5 0.6 0.7

Application Example

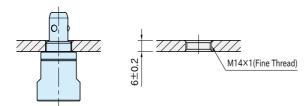

Application Example

■ Hole Preparation

■ Machining Accuracy Spacing tolerance for multiple use should be ±0.1.

■ Repeatability Repeatability is ±0.2. For higher accurate locating, use locating pins.
